## Qwik-Tip's Automated Container Attachment Improves Safety and Reduces Route Time

The Qwik-Tip II is a rear load container attachment designed to improve safety and speed up collection of commercial rear load containers. The Qwik-Tip II's patented design uses rotating locking hooks to grab, align and lock the container trunion bar onto the load sill while the ICC tip bar raises 1 to 6 yard containers to a full dump position all in 7 seconds. The Qwik-Tip II's single controlled automated motion safely and efficiently dumps rear load containers while helping to reduce typical container damage.

The Qwik-Tip II's modular design fits most makes and models of rear loaders and is easily installed on existing units. Several body manufacturers offer a Qwik-Tip II Package when ordering new packers. The Qwik-Tip II's design incorporates the ability to add a residential cart tipper

either at time of installation or in the future without modifying the load sill.

Qwik-Tip II's clean design has the lift cylinders under the center of the hopper instead of on the sides with few moving parts to ensure reliability and driver safety.

Qwik-Tip was patented in 1995 and is in operation with National Haulers, Private Haulers and Municipalities in 3 countries.
